

Amendments to the Claims:

This listing of claims will replace all prior versions, and listing, of claims in the application:

Listing of Claims:

1. (currently amended) A stack of fan folded material comprising:
at least two clips of fan folded material;
each clip comprising a plurality of fan folded sheets formed from a sameunitary web of material which travels in a length direction of the web of material, each sheet of the clip joined to at least one adjacent sheet by a weakened line wherein the weakened line is formed in the length direction of the web of material ~~a machine direction of the sheets~~ and the weakened line is located at an end of each sheet when such sheet joins the end of the adjacent sheet by the weakened line and the plurality of fan folded sheets comprise fold lines formed in the length direction of the web of material ~~a machine direction of the sheets~~; and
each clip joined to an adjacent clip by a last sheet of one clip being adhesively joined to a first sheet of a succeeding clip.
2. (original) The stack of claim 1 wherein the weakened line comprises perforations.
- 3-5. (canceled)
6. (original) The stack of claim 1 further comprising a liquid in combination with the stack of fan folded material, the liquid at an add-on rate of about 25 to about 600 weight percent based on a dry weight of the stack of fan folded material.
- 7-9. (canceled)
- 10-17. (canceled)
18. (currently amended) A stack of fan folded material comprising:
at least two clips of fan folded material;
each clip comprising a plurality of fan folded sheets formed from a sameunitary web of material which travels in a length direction of the web of material, each sheet of the clip joined to at least one adjacent sheet by a weakened line wherein the weakened line is formed in the length direction of the web of material ~~a machine direction of the sheets~~ and the weakened line is located at an end of each sheet when such sheet joins the end of the adjacent sheet by the weakened line and the plurality of fan

folded sheets comprise fold lines formed in the length direction of the web of material ~~machine direction of the sheets~~; and

each clip joined to an adjacent clip by a sheet of one clip being separably joined to a different sheet of a succeeding clip.

19. (original) The stack of claim 18 wherein the weakened line comprises perforations.

20-21. (canceled)

22. (original) The stack of claim 18 wherein separably joined comprises adhesively joined.

23. (original) The stack of claim 18 further comprising a liquid in combination with the stack of fan folded material, the liquid at an add-on rate of about 25 to about 600 weight percent based on a dry weight of the stack of fan folded material.
